

Richard Kus – De Nora Tech, Inc.  
President–Elect, 2016

I have been involved as a member of MSNO for several years, and for the last 2 years served as secretary for the board. During this time I have seen a lot of excellent work to expand MSNO, both in content and in membership. If elected president, I will continue this progress with efforts to reach-out to other technical organizations for collaboration, and to try to get more members from industry to participate. Also, reaching out to students at all levels, and conducting workshops for better education, is critical for the growth of the organization.

I have a BS degree in Chemistry (1979, Cleveland State Univ), and have been employed at De Nora Tech for 36 years. My microscopy experience is with scanning electron and ion-beam instrumentation for the past 25 years.
